

**1. Create a script that asks the user for a name, then greets the user with "Hello" and the user name on the page.**

```
<html>
  <body>
    <p id="namedisp"></p>
    <script>
      var name=prompt("Please enter your name: ");
      if(name!=null){
        document.getElementById("namedisp").innerHTML="Hello
        "+name+" !";}
    </script>
  </body>
</html>
```

---

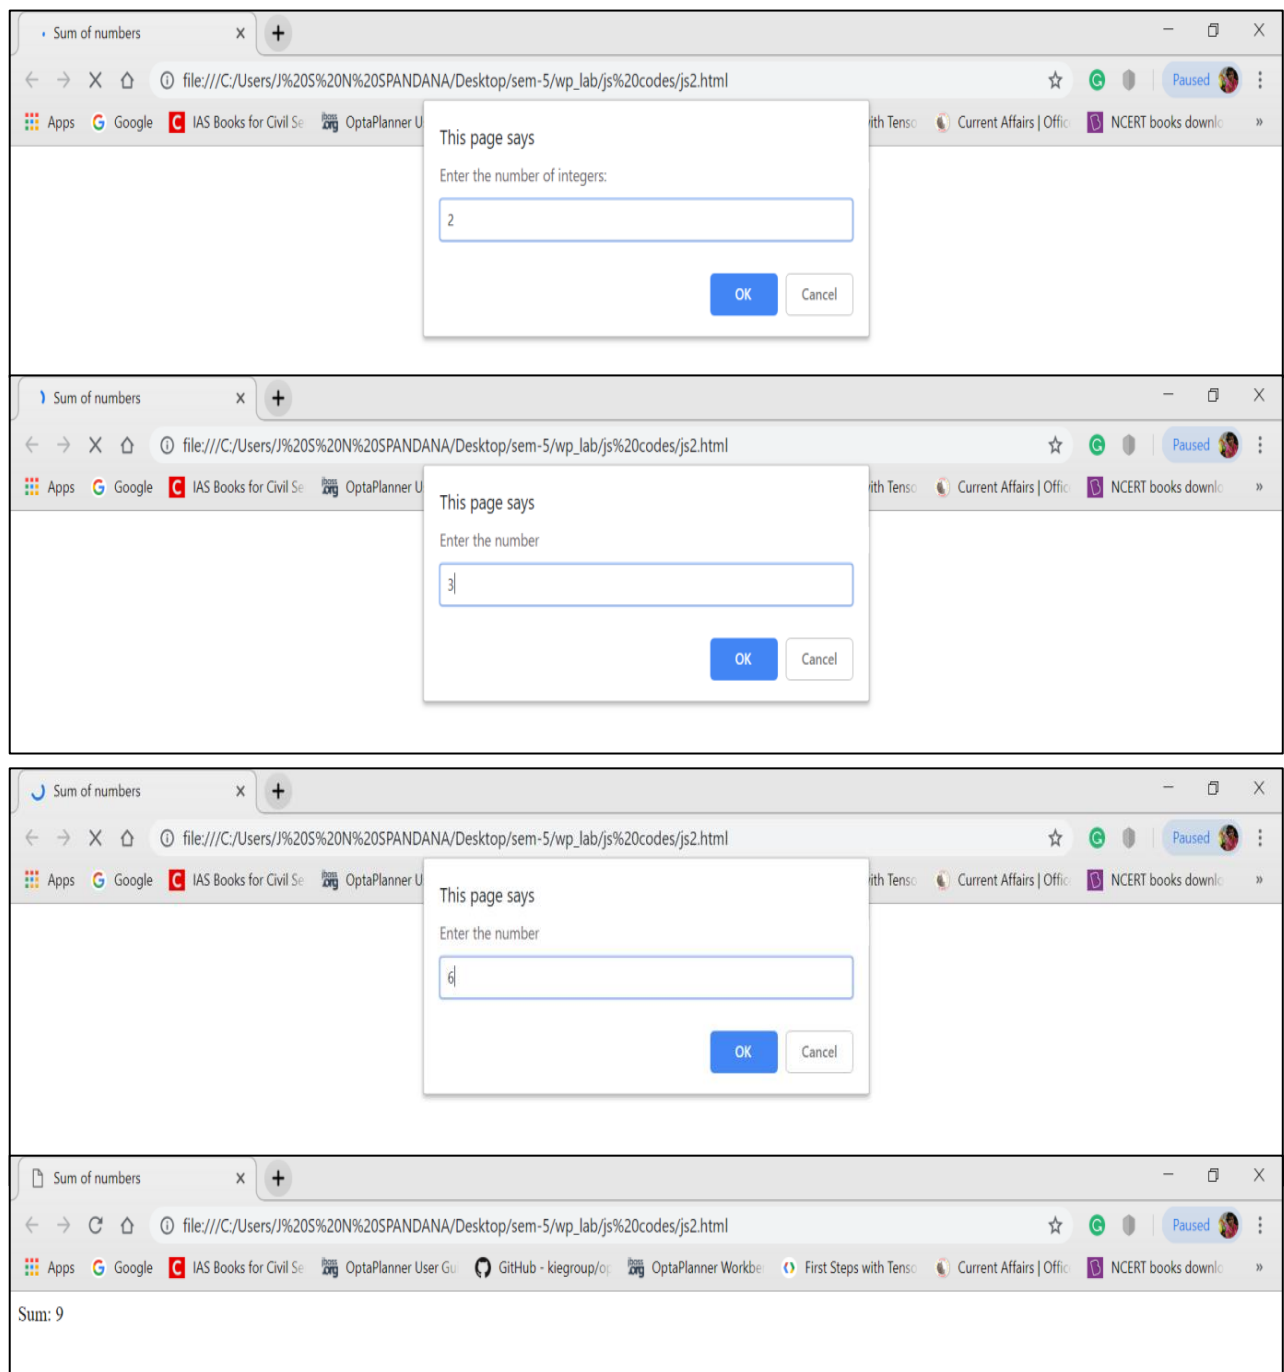

**2. Create a script that collects numbers from a page and then adds them up and prints them to a blank field on the page.**

```
<html>
  <head>
    <title>Sum of numbers</title>
  </head>
  <body>
    <p id="sumdisp"></p>
    <script>
      var n,i,sum=0,x;
      n=prompt("Enter the number of integers: ");
      for(i=0;i<n;i++)
      {
```

```

        x=Number(prompt("Enter the number ",i+1));
        sum+=x;
    }
    document.getElementById("sumdisp").innerHTML="Sum: "+sum;
</script>
</body>
</html>

```

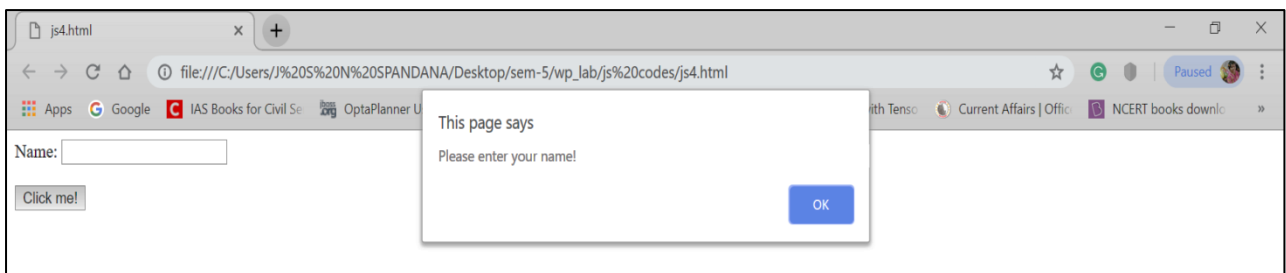

**3. Create a script that prompts the user for a number and then counts from 1 to that number displaying only the odd numbers.**

```
<html>
  <head>
    <title>Odd numbers</title>
  </head>
  <body>
    <script>
      var n=Number(prompt("Enter a number: "));
      var flag;
      for(var j=1;j<=n;j++)
      {
        if(j%2==1)
        {
          document.write(j);
          document.write("<br>");
        }
      }
    </script>
  </body>
</html>
```

**4. Create a script that will check the field for data and alert the user if it is blank. This script should run from a button.**

```
<html>
  <body>
    <script>
      function myfunc()
      {
        var n=document.getElementById("check").value;
        if(n=="")
          alert("Please enter your name!");
      }
    </script>
    Name: <input type="text" id="check"><br><br>
    <button onClick="myfunc()">Click me!</button>
  </body>
</html>
```

**5. Write a JavaScript function to get nth largest element from an unsorted array.**

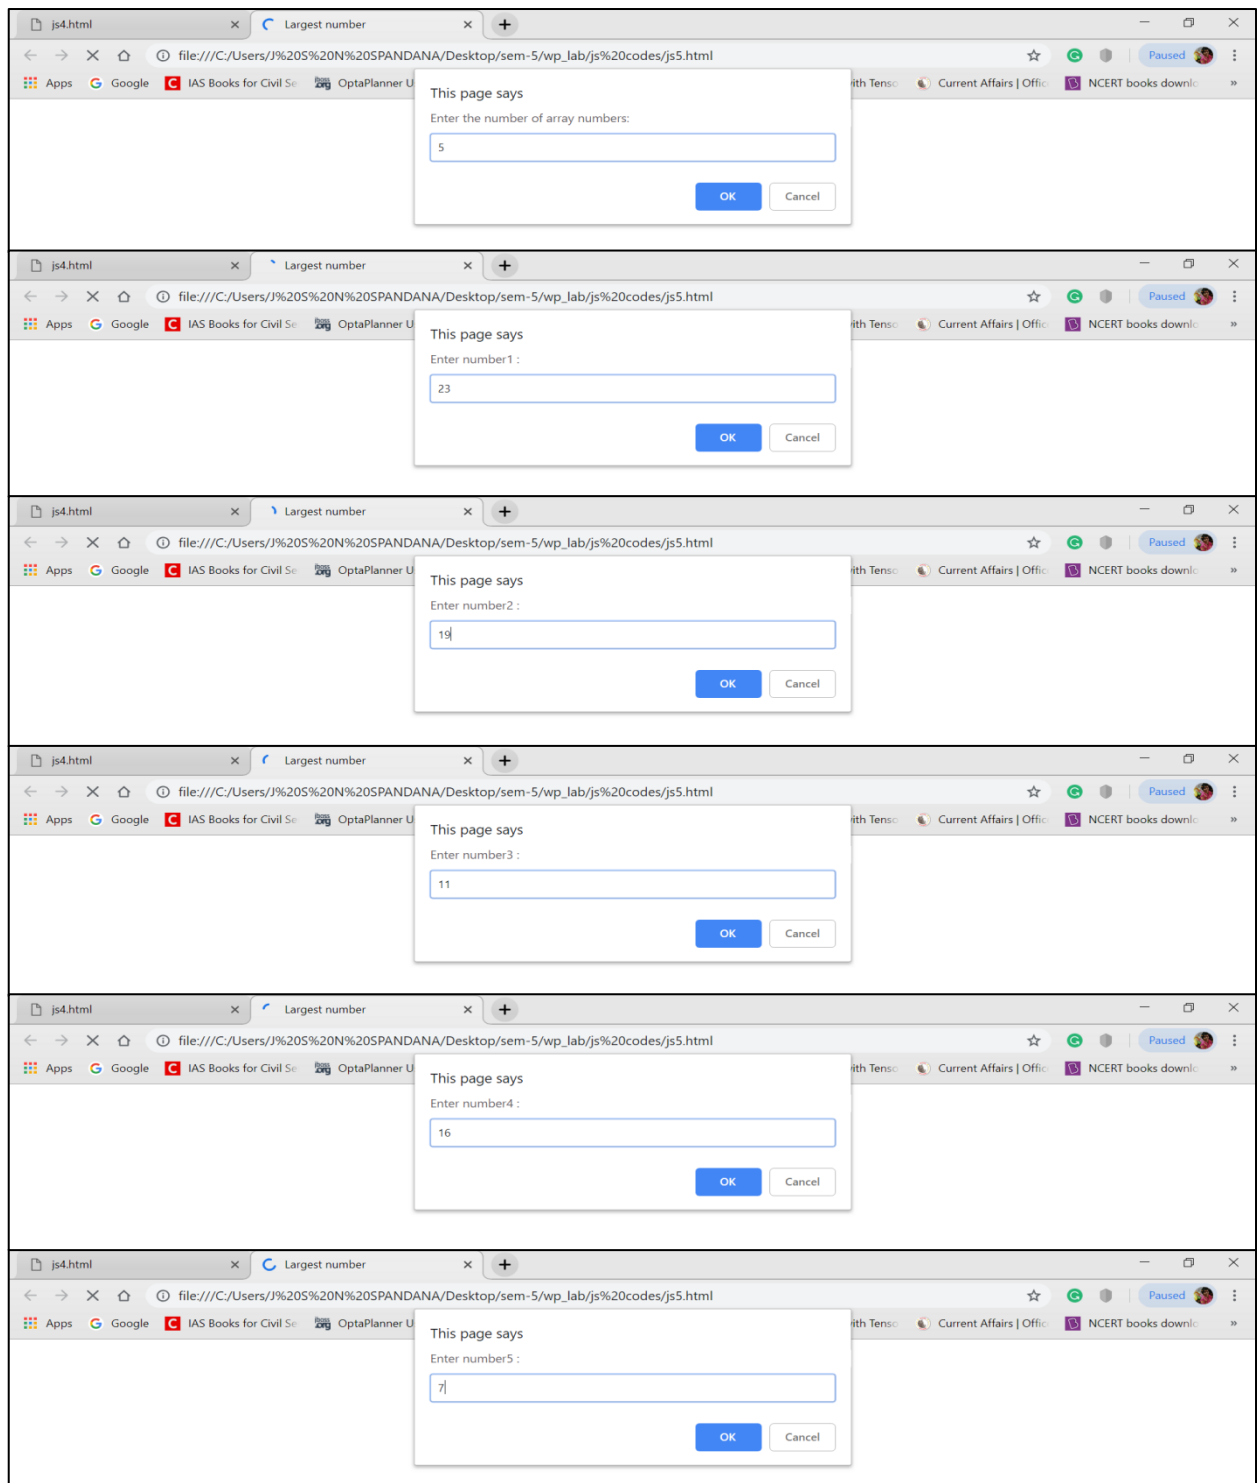

```
<html>
  <head>
    <title>Largest number</title>
  </head>
  <body>
    <script>
      var k=Number(prompt("Enter the number of array numbers: "));
      var num=[];
      var t;
      for(var i=0;i<k;i++)
      {
        t=i+1;
        num[i]=Number(prompt("Enter number"+t+" :"));
      }
      num.sort();
```

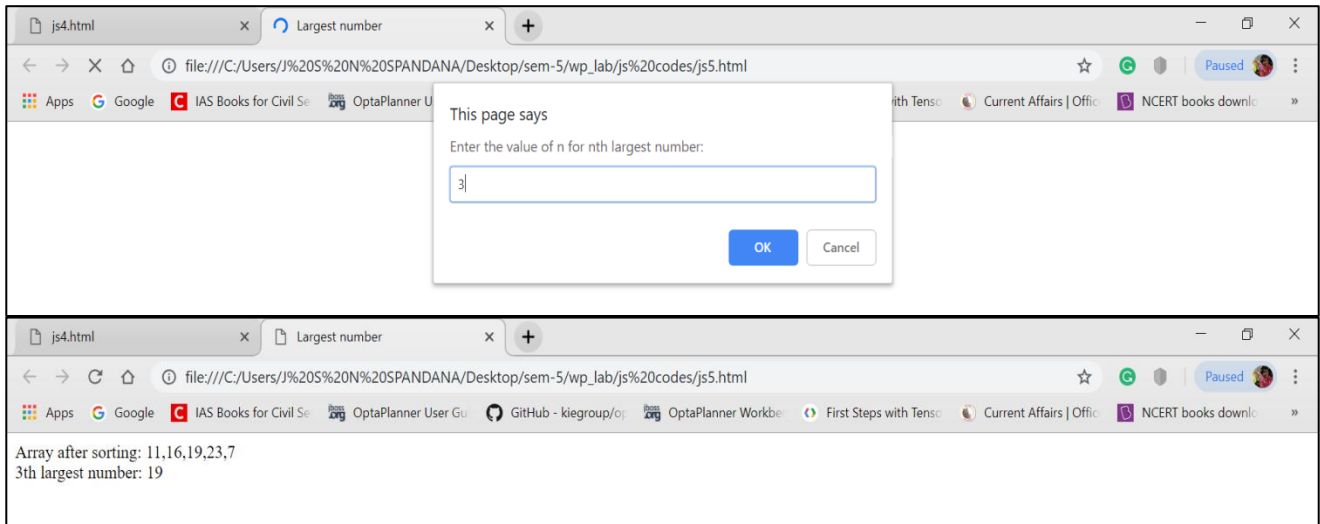

```

document.write("Array after sorting: ",num);
document.write("<br>");
var x=Number(prompt("Enter the value of n for nth largest number:
"));
document.write(x+"th largest number: ",num[x-1]);

</script>
</body>
</html>

```

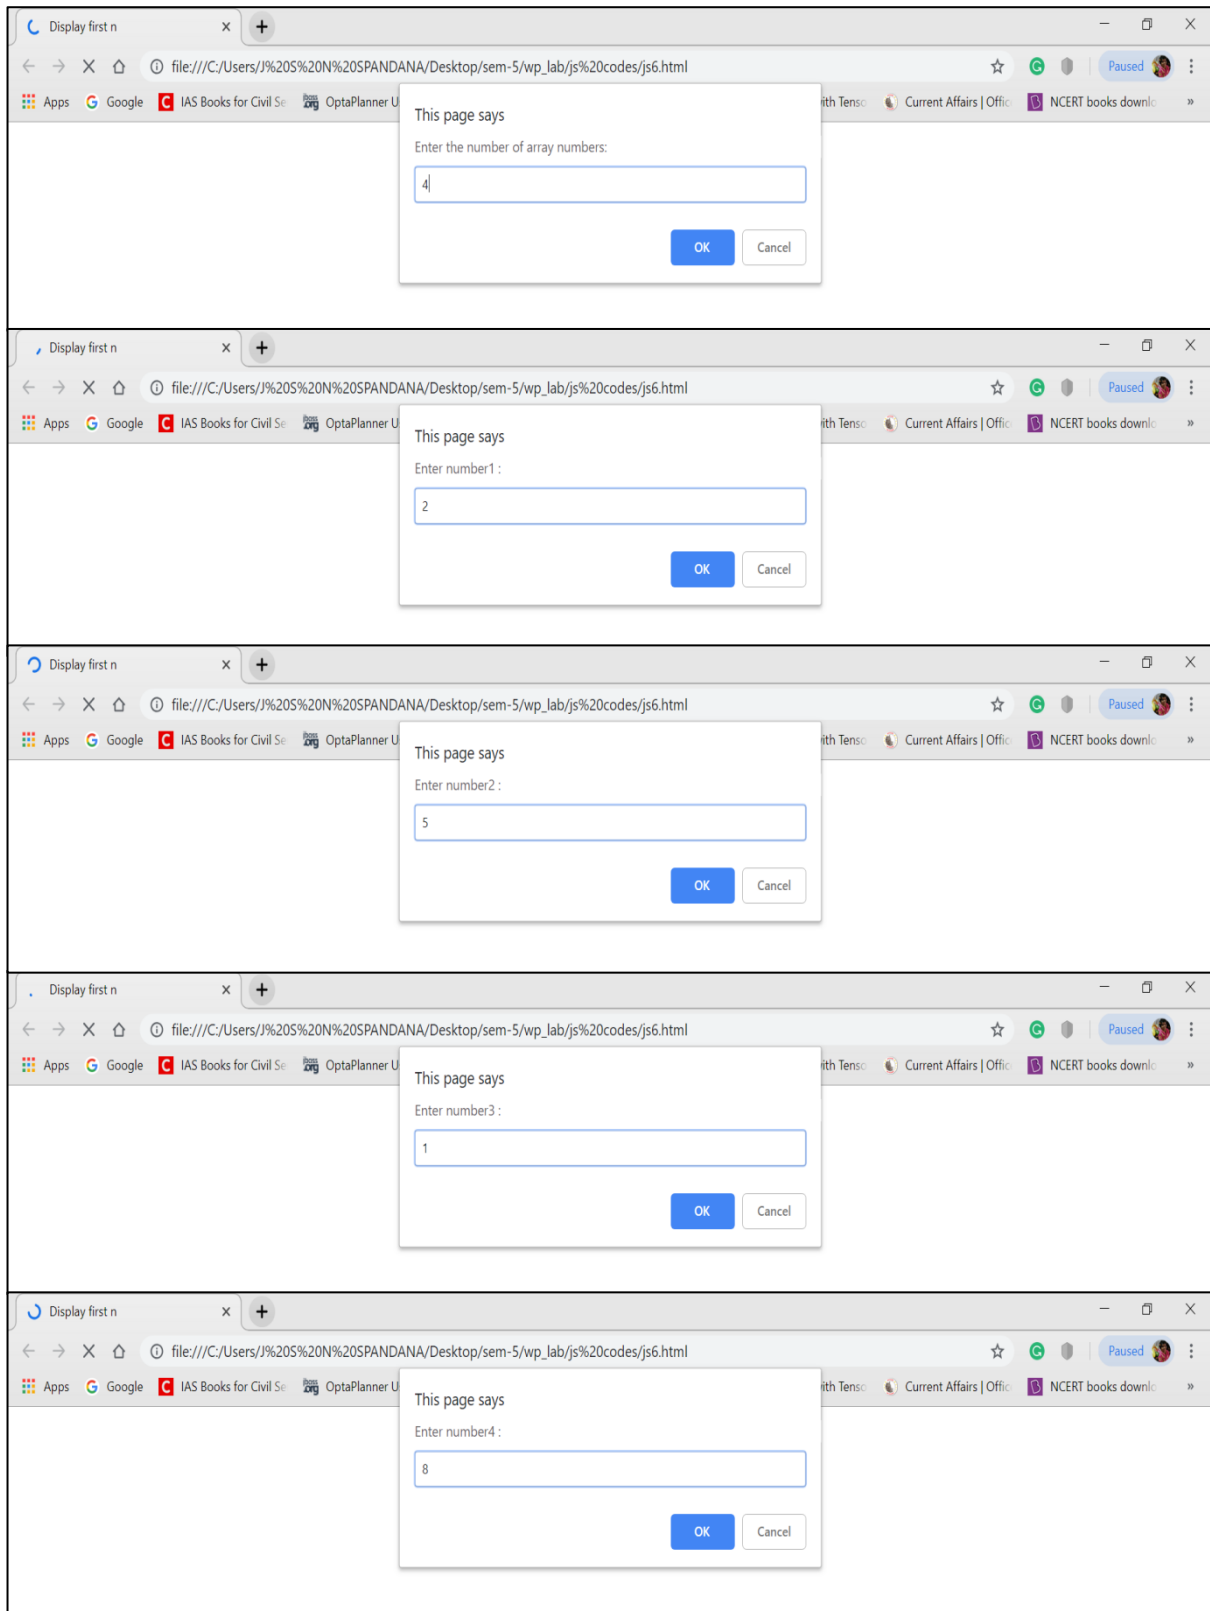

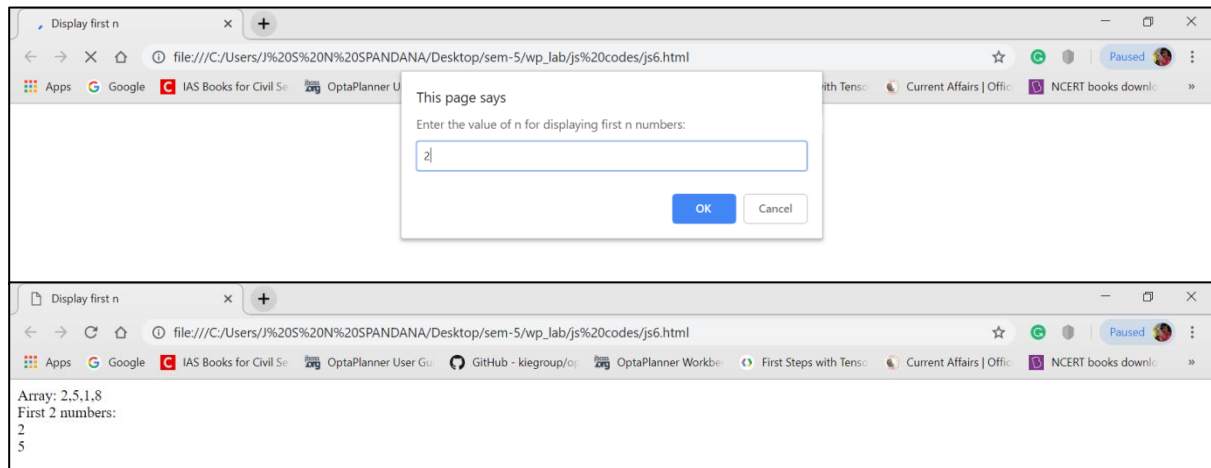

## 6. Write a JavaScript function to get the first element of an array. Passing a parameter 'n' will return the first 'n' elements of the array.

```
<html>
  <head>
    <title>Display first n</title>
  </head>
  <body>
    <script>
      var k=Number(prompt("Enter the number of array numbers: "));
      var num=[];
      var t;
      for(var i=0;i<k;i++)
      {
        t=i+1;
        num[i]=Number(prompt("Enter number"+t+" :"));
      }
      document.write("Array: ",num);
      function myfunc(j)
      {
        document.write("<br>First "+j+" numbers:<br>");
        for(var i=0;i<j;i++)
        {
          document.write(num[i]);
          document.write("<br>");
        }
      }
      var x=Number(prompt("Enter the value of n for displaying first n
      numbers: "));
```

```
myfunc(x);  
</script>  
</body>  
</html>
```

## 7. Write a JavaScript program to compute the sum and product of an array of integers.

```
<html>
  <head>
    <title>Sum and Product</title>
  </head>
  <body>
    <script>
      var k=Number(prompt("Enter the number of array numbers: "));
      var num=[];
      var t,sum=0,prod=1;
      for(var i=0;i<k;i++)
      {
        t=i+1;
        num[i]=Number(prompt("Enter number"+t+" :"));
        sum+=num[i];
        prod*=num[i];
      }

      document.write("Array: ",num);
      document.write("<br>");
      document.write("Sum: ",sum);
      document.write("<br>");
      document.write("Product: ",prod);
    </script>
  </body>
</html>
```

Array: 2,7,5  
Sum: 14  
Product: 70

## 8. Write a JavaScript program to add items in a blank array and display the items.

```
<html>
  <head>
    <title>Display array</title>
  </head>
  <body>
    <script>
      var k=Number(prompt("Enter the number of array items: "));
      var num=[];
      var t;
      for(var i=0;i<k;i++)
      {
        t=i+1;
        num[i]=prompt("Enter friend"+t+" name :");
        document.write(num[i]);
        document.write("<br>");
      }
      document.write("<br>");
      document.write("List of friends names: ",num);
      document.write("<br>");
    </script>
  </body>
</html>
```

## 9. Write a JavaScript function to merge two arrays and removes all duplicates elements.

```
<html>
  <head>
    <title>Merge arrays</title>
  </head>
  <body>
    <script type="text/javascript">
      var a = [1,2,3,4,5,6,7];
      var b = [4,5,6,7,8,9,10];
      var res = a.concat(b);
      for(var i = 0; i<res.length; i++){
        for(var j = i+1; j<res.length; j++){
          if(res[i]===res[j])
            res.splice(j--,1);
        }
      }
      console.log(res);
    </script>
  </body>
</html>
```

```

        for(var i = 0; i<res.length; i++){
            document.write(res[i] , " \n ");
        }
    </script>
</body>
</html>

```

## **Form Validation:**

```

<script>
    function validate()
    {
        var namepat=document.getElementById("fname").value;
        var mobilepat=document.getElementById("num").value;
        var mailpat=document.getElementById("mail").value;
        var passpat=document.getElementById("passw").value;
        var confirm=document.getElementById("conf").value;

        var pswPattern = /^(?=.*[0-9])(?=.*[!@#$%^&*])[a-zA-Z0-9!@#$%^&*]{6,16}$/;
        var phnoPattern = new RegExp("[0-9]{10}$");
        var mailidPattern = /^[w+([\.-]?w+)*@w+([\.-]?w+)*(\.w{2,3})+$/;

        if (namepat == "" || mobilepat == "" || passpat == "" || mailpat == "")
            alert("Please enter the values for empty fields!");

        if(!phnoPattern.test(mobilepat))
        {
            alert("Enter a valid 10-digit mobile number");
        }

        if(!pswPattern.test(passpat))
        {
            alert("Your password must comprise of numbers, special characters, upper and lowercase letters with length between 6 and 16");
        }

        if(!mailidPattern.test(mailpat))
    }

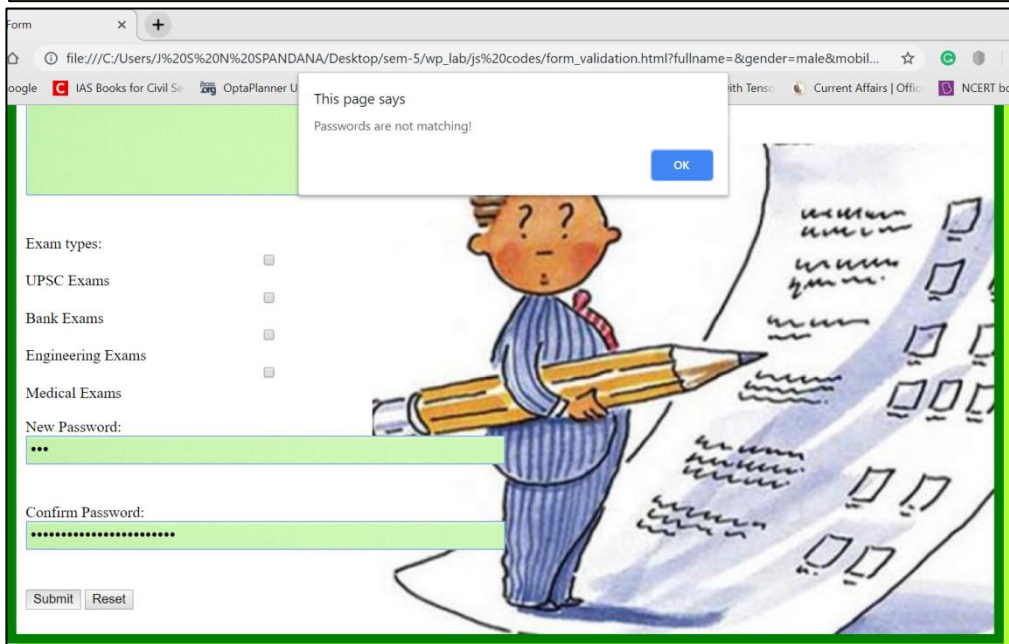

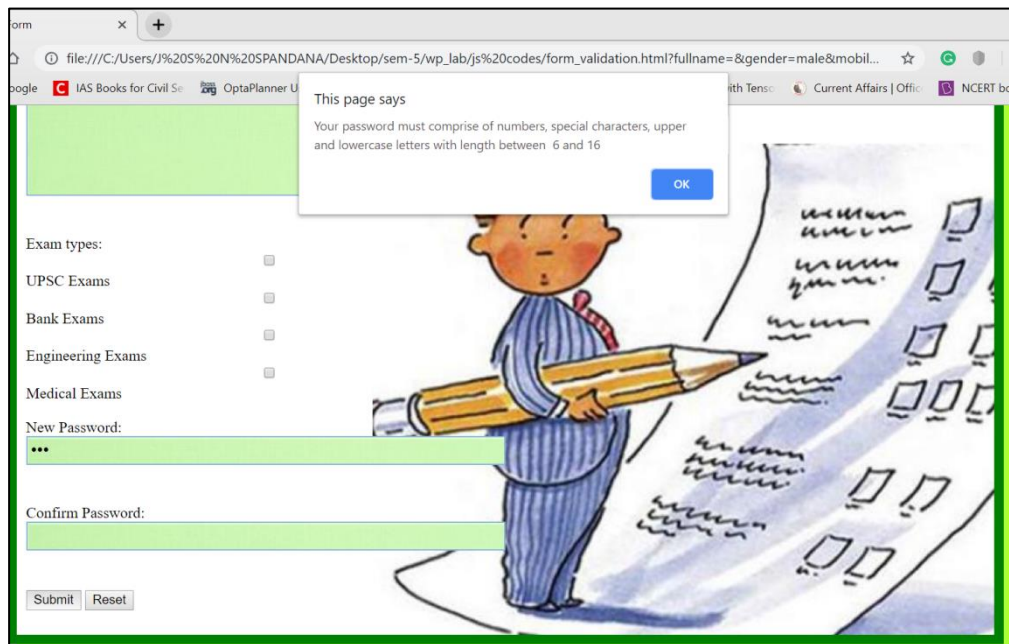

```

```

    {
        alert("Enter a valid email ID");
    }

    if(confirm!=passpat)
    {
        alert("Passwords are not matching!");
    }
}
</script>

```
